

COMET BURNHAM, 1959k.

April 6, 1960.

First observation and the position was about 7° south of Eta Aquarius with magnitude 3 and visible with the naked eye.

April 7 to June 9, 1960.

More than 50 observations made during this period.

June 10, 1960.

The last observation I made after which it disappeared at about 5° south-east of Gamma Ursa Major and was about magnitude 10.
