 AUG 27/62.

DEAR Jim;

Enclosed is a contribution from one of our older observers. He has a very good 8" Reflector but for our type of observing he can only see down to a 4th magnitude star.

I feel we should encourage him though for he is a very good self educated astronomer. He has but one eye & less than 60 <sup>vision</sup> in the remaining one. After months of coaxing this is his first effort & I appreciate it very much. This is a real interesting individual who I hope you'll someday be able to meet.

As yet I have not made any effort to see Comet Humason at the 100 inch. I will receive the Harvard notices maybe tomorrow morning.

Sincerely  
 S. J. Buntain
