St. Lambert, P.Q.

Dear Sir,-

Enclosed are the negative reports of
Comet & Nova searches for November, 1962.

The first part of the month had
poor observing weather, but it was fairly good during
the last 9 or 10 days. You will notice that area
#220 has been added to the list of areas that are being
checked. When I first looked it over I could easily see 7^m stars
in the northern half, but could barely see 4^m in
the bottom half. I hope this is no indication of how it
looks most of the time!

Best ~~wishes~~ wishes & season's greetings,

Hugh W.A. Maclean,
Niagara Falls Centre.
