Dear Miss Williamson,

Since last week, I learned about the nova, so I am sending out C & N announcement #6. That's two announcements in as many weeks. I hope that is the last discovery for a few months anyway, as these discoveries are keeping me busy! I hope that you haven't put my next bulletin "to press" yet, as I wish to make a change since the discovery of the nova. Enclosed is the new page 1 (page 2 is unchanged). However, if it has already "gone to press", forget about this new page; I can include the nova in my next bulletin.

Enclosed are my first few observations of the nova. I expect Mrs. Yane will look after observations of novae, as well as searches? The nova is well placed for me, as I can observe it at any time of the night. Being at Dec.  $+42^\circ$ , it is circumpolar from this latitude.

That is all I have to say for now. Best regards.

Good observing,

  
Jim Low
