June 29, 1963

Dear Mr. Milon,

Thanks for the information.

I received a report from an independent discoverer of the possible new Comet Alcock. Here is his report:

June 22/23 03:05EST R.A. 23h34m Dec. 22°10'N  
June 23/24 03:00EST R.A. 23h33m Dec. 22°00'N Mag. 10 or 11.

Mr. A.J Morehouse reported this object, and states that he used Skalnate-Pleso Atlas Coeli.

I note that this is close to the positions given on H.A.C. 1604 (June 21), and that H.A.C. 1606 (June 24) questions this comet.

I regret that I have not been able to observe myself for some weeks, as I have been very busy. I hope to take a look for this comet on the next clear night.

Best regards and good observing,

  
Jim Low
