Dear Mr. Matte,

Thank-you for your letter of 12 October describing your observations of Comets and the Nova.

I am preparing a chart showing the light curve of Nova Herculis, and I would appreciate a selection of your magnitude estimates for different dates.

Yes, I guess the solar eclipse kept most of us busy, but it was well worth the effort. I was with the Montreal Centre at Grand'Mere, and we had a good view of totality.

Best regards and good observing,

Jim Low
