Dear Sir:

Enclosed are Comet and Nova Negative  
Search Reports for January and February 1965.

Things have been fairly ~~quite~~ quiet  
around here this winter, with not too much observing  
time available.

I am hoping to get a look at Nova Herulis  
1963 one of these nights, if I can just stay awake long  
enough! Our factory (automotive) has been going full blast,  
and the extra hours takes its toll of awakeness.

Best regards,

Hugh Maclean,  
Magara Falls Centre.
