

COMET KILSTON, 1966b.

Since Comet Kilston is not expected to become much brighter than tenth magnitude, no general Announcement will be sent out. This note is being sent to only a few active observers and others with a special interest.

The following ephemeris was received on IAU Circular No. 1965:

1966 UT	R.A. (1950)		Dec.	Mag.
	h m	s		
Aug. 15	17 55.11		20 02.9N.	9.9
18	17 56.59		18 15.4	
23	17 58.73		16 24.2	
28	18 01.51		14 30.5	
Sept. 2	18 04.93		12 25.8	9.8
7	18 08.95		10 40.2	
12	18 13.58		8 48.6	
17	18 18.78		6 52.8	
22	18 24.53		5 02.2	9.9
27	18 30.79		3 15.0	
Oct. 2	18 37.53		1 21.8	

This ephemeris is approximate; do not expect the last two figures of the positions, on each date, to be correct. Please include position and magnitude estimates in your reports, for they may be different than the values predicted.

Please send copies of your observations, as soon as possible, and let other members of the R.A.S.C. know about this comet.

August 20, 1966.
