

Quebec 20 Sept 1966

My Dear Jim, It was an error... so here are the exact positions of my observations of KIISTON (1966b).

EPOCH 1855

13 Aug at 2100 EST = RA =	17h 51m 05s	Dec. +	19° 46'
14 " 2100 "	17h 51m 18s	+	19° 24'
17 " 2030 "	17h 52m 42s	+	18° 17'
19 " 2100 "	17h 52m 56s	+	17° 32'
21 " 2000 "	17h 54m 31s	+	17° 02'

I also made 2 observations of Comet BARBON (1966c) and one of Comet IKEYA-EVERHART (1966d) but could not take exact position because it became cloudy before I could do so.

I hope the next one will be brighter...

Sincerely yours

Jos. Matte
