

88 Lorne Ave.
St. Catharines Ont.
Tues. Nov. 14, 1967

Dear Mr. Low,

Enclosed are negative reports for July,
August, September and October, 1967. Sorry I'm so far
behind.

Nova Herculis 1963 was seen on July 12, at
just under $14^m 0$.

Nova Delphini 1967 has been noted many
times - quite often without optical aid. I haven't had a
chance to list my observations yet.

I seem to have misplaced my copy of the
list of stars near the nova. If you have a spare one I would
appreciate it. I made up a chart of the nearer faint stars,
but the nova is still too bright for it.

Best wishes -

Hugh Maclean.
