

Quebec 5 May 1968

Dear Jim, Re: Nova Vulpeculae 1968

28	April 1968	at	0200	E.S.T.	Mag.	5.2
29	"		0100	"		5.3
30	"		0100	"		5.4
1	May		0100	"		5.5
2	"		0100	"		5.6
3	"		0100	"		5.7
4	"		0100	"		5.7

The first I observed this nova I thought it was NOVA 1670... because it is so close to that spot... I made 10 more observations of Comet Ikeya-Seki but did not take any positions... As for Nova Delphici I made 25 more observations <sup>after</sup> I sent my last reports... Since the last week of March I saw observe it with the naked-eye and now must be pretty close to 4<sup>TH</sup> Mag.

I hope you receive these on time so they will be on your board display in Calgary where I hope to see you.

Sincerely,

  
JOS. MATTE, R.A.S.C.
