July 19, 1970

Dear Mr. Low;

I am a student member in the society, and from the journal, I learned that you were in charge of comet and nova activities. I am writing you in regard to the comet Neujmin that will be returning soon.

I recently read in the 1970 World Almanac, that the comet Neujmin will be returning in August of this year. Could you please send me the approximate magnitudes of this comet, as well as its right ascension and declination. Although I was unable to get any pictures of comet Bennet, I would like to try my luck at this one. Could you please send me any information on this. My camera is a very old bellows type Kodak, but I have been able to take some very good pictures of the moon and star trails with it.

Could you please tell me how I could make reports of my observations of this comet.

Yours Truly,

Murray Dewing
