Dear Mr. Law,

I am a member of the Society although not a member of your section. I am also in the A. A. U. S. O. and am doing some research at the moment for my self. I would appreciate it if you could supply me with the following information

1. Max. Mag. before, during, and after nova stage
2. Min Mag. before, during and after nova stage.
3. Position R.A. & Dec.
4. Duration of nova stage
5. Discovered by whom?
6. Is there a star still remaining or is it a nebulous cloud?
7. Spectral type before & after.

This information is needed for the following

Nova 1572 - in the constellation of Cassiopeia. Just north of κ and just west of star 10, just south east of star 32 or A. A. U. S. O. assignment RU, approx. position is 0 h. 27 min, +56.5 Dec.

over please

Nova-1604 - in constellation OPHIUCHUS,
just flamed no. 58 star, north of ϵ and
west of ζ of star Xi. Approx position is
17h 27min. -21° Dec.

I would greatly appreciate it if you could
supply me with all the information possible.
I will be hoping to hear from in the future

Many Thanks
Mike Rolde
